

THE FACTOR FRONTIER

YOUR QUARTERLY GUIDE TO FACTOR INVESTING.

EDITION 01 | JUNE 2023

Market Outlook

Markets have had a good one-year return with the smaller size firms outperforming the larger cap firms over the period. This outperformance in the medium and small cap indices was also observed in the past quarter. Over the 1-year period, the largest 100 firms represented by Nifty 50 and Nifty Next 50 Index posted 23% and 21% respectively while Midcap gave 34% and Smallcap posted 31% returns respectively. The Nifty 50 Equal Weight index returned 28% during this 1-year period. Over the past quarter the Nifty 50 and Nifty Next 50 generated 11% and 16%, while Nifty 50 Equal Weight, Midcap and Smallcap gave 15%, 18% and 20% respectively.

Global Market Performance (Last 5 Years)

Globally developed markets are having a good one year performance while the emerging markets in USD terms have been moderately positive for the year. The S&P 500 in US dollar was up +20% for the past one year period showing a strong US market performance. The UK markets were also positive over the last one year at +9% in GBP home currency. The broader Emerging markets in US dollars currency was in comparison marginally positive at +2% over the same one year time period. The Eurozone has also shown a great one year performance with the Euro Stoxx Index made of the largest European firms up +20% in Euros. The past quarter has also been positive for all the indices except the UK which has shown a flat return.

NJ Factor Performance (Last 5 Years)

The markets have posted a strong upward trend in the past quarter. Additionally, all factors exhibited strong positive performance during the quarter as well. Over a one-year period, the Nifty 500 TRI yielded a return of +23.9%. During this one-year period, all factors, Value, Quality, Low Volatility and Momentum have strongly outperformed the market index. Specifically, over the one-year time period, NJ Traditional Value posted a return of +41.6% while NJ Enhanced Value gave +23.4%, NJ Quality+ achieved +42.5%, while NJ Low Volatility+ and NJ Momentum+ delivered returns of +28.2% and +31.7% respectively.

Data from 30th Sep, 2006 to 30th June 2023

Correlation Matrix based on excess return of each factor over Nifty 500 TRI

	NJ Low Volatility+	NJ Momentum+	NJ Quality+	NJ Enhanced Value	NJ Traditional Value
NJ Low Volatility+	1	0.55	0.77	0.51	0.32
NJ Momentum+	0.55	1	0.68	0.63	0.53
NJ Quality+	0.77	0.68	1	0.75	0.57
NJ Enhanced Value	0.51	0.63	0.75	1	0.75
NJ Traditional Value	0.32	0.53	0.57	0.75	1

Source: CMIE, NJ Smart Beta. Data from 30th June, 2013 to 30th June, 2023

Exploring the correlations and interconnections between factors is of extreme importance as it helps to design an optimally diversified factor portfolio. The factor correlation has been calculated by using excess return over Nifty 500 TRI.

NJ Low Volatility+ is very strongly correlated with NJ Quality+ (0.77). While the degree of correlation between the NJ Low Volatility+ is moderately strong with the NJ Momentum 100 (0.55), it is fairly weak with the NJ Traditional Value (0.32) and moderate with NJ Enhanced Value (0.51) portfolio.

The degree of correlation between NJ Momentum+ is moderately strong with all the other indexes i.e. NJ Quality+ (0.68), NJ Traditional Value (0.53) and NJ Enhanced Value (0.63).

NJ Quality+ has moderately strong correlation with NJ Traditional Value (0.57) and strong correlation with NJ Enhanced Value (0.75).

NJ Enhanced Value has strong correlation with NJ Traditional Value (0.75).

Our focus this month is on three research articles that examine different weighting methodologies.

1. Not All Low Volatility Portfolios Are The Same

<https://www.man.com/maninstitute/not-all-volatility-portfolios>

The authors argue that low-volatility strategies should not be viewed as a homogenous category and identify implementation techniques that can lead to differentiated performance.

2. Betting against Beta (<https://doi.org/10.1016/j.jfineco.2013.10.005>)

The authors find that low beta stocks outperform high beta stocks. This outperformance is even more pronounced when the long and short portfolios are beta weighted. Their paper added to the literature on low volatility.

3. Optimal Versus Naive Diversification: How Inefficient is the 1/N Portfolio Strategy?

<https://doi.org/10.1093/rfs/hhm075>

The authors evaluate out of sample performance of 14 weighing methods and conclude that it is not easy to beat equal weighting methodology out of sample. One of the interesting papers on the effectiveness of equal weighting methods.

A Comprehensive Exploration of Factor Investing.
